

THEFT PREVENTION RELATED PARTS

FEATURES & COMMITMENT

ARM JOINT

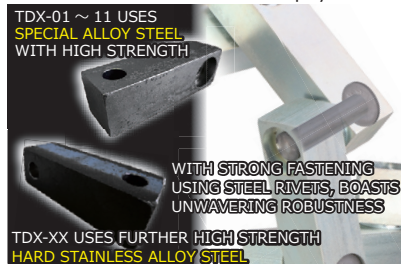

Flexible and user-friendly arm joint, can be adapted to each sized arm and how to use.

- TDX-01
Lightweight model. Flat bar joint allow for stable lateral movement and smooth attachment/detachment. Compact when stored.
- TDX-03 ~ 11 · XX
Multi-jointed arm. Offers robotic arm-like flexibility, significantly improving handling freedom.

MATERIAL

Selected materials resistant to physical destruction!

- TDX-01 ~ 11
Arm and lock shaft sections utilize special alloy steel with high hardness, toughness, and corrosion resistance, achieves resistance to physical damage.
- TDX-XX
Main body is made of special alloy tool steel. Arm section is heat-treated to the core, ensures hardening strength. Insertion shaft, also heat-treated, achieves high resistance to impact. Boasts unwavering robustness.

BREAKING STRENGTH

Keep destructive devices away!

Special alloy steel keeps bolt clipper and hydraulic cutter away, which thefts often use. Also regarding cutting by thunder, arms are made of high durable material, can take a considerable amount of time, produces a loud cutting noise, and requires frequent blade replacement and so on.

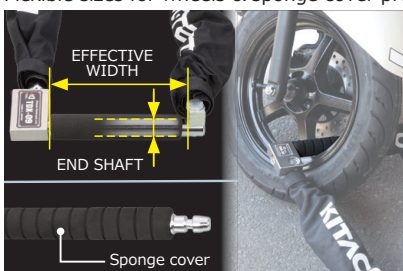

PRODUCTION

With meticulous attention to detail, providing products with reliable and trustworthy quality. Craftsmanship of Japanese artisans helps products built to last.

END SHAFT

Flexible sizes for wheels & sponge cover preventing the rims scratched.

Special alloy steel used in end shaft. Also sponge cover is provided above it to prevent the contact area scratched. Further, K · PAD replacement sponge is prepared in case to address any wear and tear or deterioration. Safe and reliable even if long term use.

LONG TYPE "TDX-06"

TDX-06 is long type designed for two motorcycles or four-wheeled vehicles.

Long-type lock based on TDX-03 (arm angle and shaft diameter). Can be used to lock two motorcycles simultaneously or to lock the wheels of a four-wheeled vehicle. ※ Four-wheeled vehicle, cannot be installed depending on the spoke design, grade and structure of the wheel (e.g., small diameter wheels).

KEY CYLINDER BLOCK

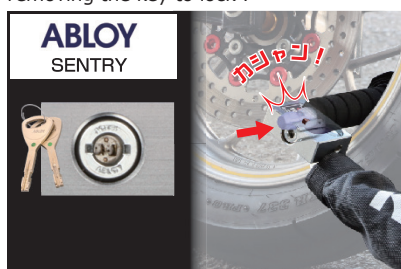

Strong Key Cylinder Block ! TDX-11/XX comes with cover preventing cylinder from any dusts entering.

- All models uses strong key cylinder block preventing breaking lock.
- TDX-01 ~ 06 : SPECIAL ALLOY STEEL
 - TDX-09 ~ XX : HARD STAINLESS ALLOY STEEL
- TDX-11 · XX equipped with key cylinder cover. Prevents dust and foreign objects from entering, increasing durability.

KEY CYLINDER

All models feature one-touch lock ! Simply insert the shaft without removing the key to lock !

- The strongest class of key cylinder. Uses the "SENTRY" key cylinder from Finland's ABLOY company. With high operability by reversible key and special structure preventing damage and unauthorized unlocking, boasts world-class security performance.
- Emphasis on ease of use
No key is required when locking with designed specifically for motorcycle locks. One-touch locking by simply inserting the key cylinder block into the shaft.

PROTECT COVER

Outer cover with high weather resistance and strong resistance to abrasion against the ground.

- Excellent weather resistance and fatigue resistance.
- TDX-01 ~ 09
High weather resistance nylon
 - TDX-11 · XX
Reinforced fibers for increased strength. Maintains its shape even in long term use, providing robust protection against impact and abrasion.
